No Refills Without  
Physician Authorization

**Rx Only**  
NDC# 68405-8014-26  
of this co-pack

## **Gaboxetine™** **Convenience Pack**

### **Fluoxetine: Why is this medication prescribed?**

Fluoxetine is a selective serotonin reuptake inhibitor (SSRI) used to treat depression, obsessive-compulsive disorder, panic attacks, certain eating disorders (bulimia), and a severe form of premenstrual syndrome (premenstrual dysphoric disorder or PMDD). This medication works by restoring the balance of natural substances (neurotransmitters) in the brain, thereby improving mood and feelings of well-being. This drug has also been used to treat certain other eating disorders (anorexia nervosa), obesity, and depression associated with bipolar disorder.

### **GABAdone™ : Why is this medication prescribed?**

**GABAdone** is a Medical Food product that provides the amino acids that are precursors to the neurotransmitters that have been depleted due to certain disease states or as a result of certain drug side effects. This Medical Food stimulates the body to produce the neurotransmitters that induce sleep, promote restorative sleep, and reduce snoring. Patients with sleep disorders frequently experience a nutritional deficiency of tryptophan and choline. Patients with sleep disorders frequently show reduced blood levels of serotonin and 5-hydroxytryptophan. Choline deficiency has also been associated with sleep disorders, particularly those associated with sleep apnea syndromes.

**GABAdone** aids in the nutritional management of serotonin, acetylcholine and GABA production deficiencies in patients with sleep disorders and anxiety.
