

## ***Hypertensolol***<sup>TM</sup> Convenience Pack

### **Metoprolol: Why is this medication prescribed?**

This medication is a beta-blocker used to treat high blood pressure, chest pain (angina), and heart failure. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems. This drug works by blocking the action of certain natural chemicals in your body (such as epinephrine) that affect the heart and blood vessels. This results in a lowering of heart rate, blood pressure, and strain on the heart. This medication has also been used for irregular heartbeats, heart failure, migraine headache prevention, tremors and other conditions as determined by your doctor.

### ***Hypertensa***<sup>TM</sup> : Why is this medication prescribed?

***Hypertensa*** is a Medical Food designed to aid in the nutritional management of the metabolic process associated with hypertension (high blood pressure) ***Hypertensa*** is designed to aid in the nutritional management of patients who are treated with ACE inhibitors. Hypertensive patients are frequently deficient in L-arginine and choline. The ***Hypertensa*** formula facilitates the production of arginine and choline by the body. ***Hypertensa*** stimulates the body to produce neurotransmitters that initiate vasodilatation of constricted arteries in hypertension. ***Hypertensa*** potentiates nitric oxide and acetylcholine production in patients with hypertension.

***Hypertensa*** aids in the nutritional management of nitric oxide and acetylcholine production deficiencies in patients with hypertension.
