

Rimantalist™ Convenience Pack

Rimantadine: Why is this medication prescribed?

Rimantadine is used to prevent or treat a certain type of flu virus (influenza A). If you have been infected with the flu, this medication may help make your symptoms less severe and shorten the time it will take you to get better. Taking rimantadine if you have been or will be exposed to the flu may help to prevent you from getting the flu. This medication is an antiviral that is believed to work by stopping the growth of the flu virus. This medication is not a vaccine. This medication is used to treat influenza A and for influenza A prevention.

Lister-V: Why is this medication prescribed?

Lister-V is a Medical Food product that provides the amino acids that are precursors to the neurotransmitters that have been depleted due to certain disease states or as a result of certain drug side effects. The Medical Food stimulates the body to produce the neurotransmitters that are needed to strengthen a patient's immune system. Patients with a compromised immune system are known to have nutritional deficiencies of arginine, choline, flavonoids and certain antioxidants.

Lister-V is a specially formulated Medical Food product, designed to enhance immune function by activating the white blood cells to seek out and destroy viruses when they invade the body.
