

Therabenzaprine-60™

Convenience Pack

Cyclobenzaprine: Why is this medication prescribed?

Cyclobenzaprine is used to relax muscles. This medication is used to treat muscle spasms. It is used along with rest and physical therapy to decrease muscle pain and spasms associated with strains, sprains or other muscle injuries. It has also been used to treat stiff, tender, and painful muscles. This medication is intended for short-term use, usually no longer than 3 weeks.

Theramine™ : Why is this medication prescribed?

Theramine is a Medical Food product designed to aid in the nutritional management of pain syndromes. **Theramine** stimulates production of serotonin, GABA, norepinephrine, nitric oxide and acetylcholine, the neurotransmitters that are involved in pain disorders. If the timing and secretion of these neurotransmitters are effectively modulated, acute, and chronic pain disorders are more effectively managed. **Theramine** provides L-arginine at a low dose along with choline and L-glutamine to inhibit the NMDA and opioid receptors.

Theramine aids in the nutritional management of serotonin, GABA, and acetylcholine production deficiencies in patients with pain syndromes
