

Theratramadol-90™ Convenience Pack

Tramadol: Why is this medication prescribed?

Tramadol is used to relieve moderate pain. It is similar to narcotic pain medications. It works on certain nerves in the brain that control how you experience pain. This medication may cause dependence if used regularly for an extended time or if it has been used in high doses.

Theramine™ : Why is this medication prescribed?

Theramine is a Medical Food product designed to aid in the nutritional management of pain syndromes.

Theramine stimulates production of serotonin, GABA, norepinephrine, nitric oxide and acetylcholine, the neurotransmitters that are involved in pain disorders. If the timing and secretion of these neurotransmitters are effectively modulated, acute and chronic pain disorders are more effectively managed. **Theramine** provides L-arginine at low dose along with choline and L-glutamine to inhibit the NMDA and opioid receptors.

Theramine aids in the nutritional management of serotonin, GABA, and acetylcholine production deficiencies in patients with pain syndromes.
